Pungitius pungitius, *383–396*

Ranunculus acris, 404
rat, *559*, *561*, *564–565*, *566*, *566–567*, *581*
Requena verticalis, 362
Rhoeo spathacea, 668, 673
rice, *556*
Ricinus, 439

Salmo clarki, 340
  gairdneri, 340, *441–452*
  trutta, *339–359*
Salmonella typhimurium *555*, *562*, 577
Salvelinus sp., 339, 340, 356
  fontinalis, 340, 377
  hybrids, 356
  namaycush, 340
Schistocerca gregaria, 101
Schizophyllum commune, *561*
Schizosaccharomyces pombe, *557*
Secale, 422
  cereale, 405, 609
Senecio squalidus, 148
  vulgaris, *145–149*
Solanum lycopersicoides, 439
Sordaria brevicollis, *564*
sticklebacks, *371–382*, *383–396*
Sturnus vulgaris, 705–715
Sultan barley, *107–111*

Takydromos sexlineatus, *457–459*
Taraxacum officinale, *1–10*
Teleogryllus oceanicus, 362
Thachydosaurus rugosus, 511, 517
Tradescantia paludosa, 404
Tribolium, 235, 237, 238
Trichia hispida, *649–653*
  striolata, 649, 652
Trifolium pratense, 495
Triticum aestivum, 609
Triturus cristatus carnifex, *567*
Turdus merula, *705–715*
  philomelos, *705–715*
Tympanophora similis, 362

Vaccinia, 244

wheat (hexaploid), *572*
white clover, *563–564*

Xenopus, 245

INDEX OF SUBJECTS

activation, reductive, of DNA, 562
adaptive behaviour and learning, 729
adaptive significance of dorsal spine variation, 371–382, 383–396
Adh polymorphism, effects of ethanol on, in *Drosophila*, 51–67
African butterflies, polymorphism in, 583–593
albino shells in snails, 21–35
alkylation damage, repair of, in DNA, 565
alleles, estimation of number of, 495–507
alleles in pollen of autotetraploid ryegrass, 415–422
allozyme inheritance in brown trout, 339–359
allozymic divergence in *Cepaea*, 655–665
amphiplasty in genus *Aegilops*, 603–611
aposematic colour forms, species polymorphic for, 677–686
assortative mating in *Phlox*, 595–602
Atlantic herring, variability patterns, 687–704

B-chromosome, introduced, elimination of, 453–456
biochemical polymorphism in charr, 249–257
biometrical genetic analysis of learning, 579
breeding clonal crops, strategy of, 397–401
brown trout allozyme inheritance, 339–359

caffeine, effect of, on cytogenetic damage in Friend leukaemia cells, 560–561
carcinogenesis and cellular oncogene activation, 575
cauliflower mosaic virus, 573
chiasma distribution patterns, 85–100
chiasma frequency and supernumerary segments, 101–106
chromatin structure, changes in, in lampbrush chromosomes, 567
chromosomal components of reproductive isolation, 85–100
chromosomal distribution of DNA sequences, 556
chromosomal localisation of fitness modifiers, 625–634
chromosomal location of dwarfing gene, 177–183
chromosome linkage, 235–238
chromosome studies in rat liver, 581
chromosomes, identical, pairing of, 107–111
clastogenicity of organic compounds, 564–565
clonal diversity in *Taraxacum*, 1–10
cloning of genes of *E. coli*, 557
colour polymorphism in prey species of wild birds, 705–715
colour polymorphism, natural selection on, 649–653
comparison of inbred lines, 299–308
cross-compatibility and seed-set in autotetraploid ryegrass, 423–434

Darwinian theory, 241
deficient variants of mouse cell lines, 559
detection of euchromatic extra segment in grasshoppers, 167–175
differences in clastogenetic response to cyclophosphamide, 561
differential responses to ethanol, 309–320
diversity, genetic, measurement of, 1–10
DNA binding of cyclophosphamide, 576
DNA double-strand break repair, 555
DNA packaging in phage T1, 568, 568–569
DNA repair studies in *E. coli*, 574
DNA replication and recombination, 461–462
DNA sequences in flax genome, 576
DNA structures, 242–246
dorsal spine variation in sticklebacks, 371–382, 383–396
dosage compensation on *Orthoptera*, 361–369
double mutant and somatic hybridisation, 79–83
dwarfing gene, chromosomal location of, 177–183

evidence on predation in relation to dorsal spine variation in sticklebacks, 371–382
evolution and meiotic gene conversion, 113–138
evolution in *Allium* genomes, 563
evolution of the *Obscura* group of *Drosophila*, 469–482, 483–492
experimental populations of *Drosophila*, evolution of, 269–281

fitness components and maintenance of lethal gene Curly, 269–281
fitness components at *Adh* locus, 309–320
fitness estimation, 527–543
fitness modifiers in *Lucilia cuprina*, 625–634
fusion of centromeres, 435–439

gametic gene transfer in mustard, 293–297
gene expression in plants, 573
gene selection, 613–624

gene suppression in *Drosophila*, 215–222
gene therapy, 462–463
gene transfer in *Nicotiana*, 545–551
genes, prolamin of cereals, 572–573
genetical problems of *Lepidoptera*, 562
genetic and morphologic variability patterns in herrings, 687–704
genetic architecture of male courtship sequence, 321–337
genetic architecture of muscle fibres, 643–647
genetic background and ethanol, effects of on *Adh* in *Drosophila*, 51–67
genetic control of clamp cell formation, 561
genetic divergence in *Cepaea*, 655–665
genetic parameters for skeletal defects, 193–203
genetic variation in reptile ticks, 509–525
genetics of *Helix aspersa*, 11–20, 21–35
genotoxic effects on reproduction in male rats and mice, 566–567
genotypes in autotetraploid ryegrass, incompatibility of, 403–413
globin gene expression and hematopoietic differentiation, 465–466
glutamine synthetase gene in Chinese hamsters, 580–581
gynogenetic diploid rainbow trout, 441–452

habitat selection in *Drosophila*, 139–143
homomorphic sex chromosomes in lizards, 457–459

induction of resistant mutants in A-T cells, 557
inheritance of quantitative characters in *Drosophila*, 473
inheritance of vicilin storage protein genes, 185–191
insect sex chromosomes, 235–238
introduced *B*-chromosomes, elimination of, 435–456
irradiated pollen, use of in gene transfer, 545–551
isolation of mRNA from white clover, 556–557

kin selection, models of, on seed provisioning, 151–165

lethal gene Curly, maintenance of, 269–281
linamarese protein, control of by Li locus in white clover, 563–564
linearised plasmid DNA molecules in *E. coli*, 565
linkage and fitness estimated from pedigrees, 69–77

male courtship sequence in *Drosophila*, 321–327
mating advantage in *Adalia*, 37–49
mating systems in plants, 595–602
meiotic gene conversion, properties of, 113–138
meiotic transmission rates of *B*-chromosomes, effect of temperature on, 259–268
melanic polymorphism in ladybird beetle, 37–49
membrane damage, effect of on a mutagenesis assessment, 580
Mendel's rules and gene selection, 613–624
mercury-resistant plasmids in *E. coli*, 568
metabolism of C-CDA by rats and mice, 566
metabolism of CDA, 559
molecular analysis of actin genes, 559–560
molecular analysis of genes for storage proteins of *Pisum*, 563
molecular evolution of rice species, 556
molecular studies of *NIAD* gene, 554
muscle fibre characteristics, genetic architecture of, 643–647
mutagenesis in yeast, 572
mutagenesis, ultraviolet, specificity of, 570
mutagenic activity, assessment of, 555, 578
mutagenic effects of lead in yeast, 557
mutagenic potency of anti-tumour agents, 556
mutagenic repair of DNA crosslinks, 566
mutagenicity assay, use of for detecting chemical mutagens, 578
mutagenicity of anti-cancer drugs, 561
mutagenicity of catecholamines in mouse lymphoma, 569–570
mutagenicity of indoor airborne particles from tobacco smoking, 577
mutagenicity of polycyclic aromatic hydrocarbons, 562–563
mutagenicity testing with somatic cells in *Drosophila*, 579
mutant yield in *E. coli*, 558
mutation and repair in natural populations of *Drosophila*, 223–234
mutation genes of plasmid TP 110, 569
mutation of albino shells in snails, 21–35
mutation spectra, 570–571
mutational aspects of hybrid dysgenesis, 571
mutational load and sex advantage, 717–720
mutations, somatic and germline in rodents and man, 574–575
mutations, specific suppression of, 553–554

natural selection and heredity, 463–464
natural selection on colour polymorphisms, 649–653
nucleolar competition in *Aegilops*, 603–611

outcrossing frequency and polymorphism in *Senecio*, 145–149

pairing of identical chromosomes, 107–111
paramutation in *Antirrhinum*, 580

pedigree inbreeding and single seed descent, 299–308
phage T1 DNA metabolism, 568, 568–569
phenotypic covariation with related species of sticklebacks, 383–396
phylogeny of ten species of *Drosophila*, 483–493
plasmid DNA, repair of bacterial, 569
pollen tetrads, use of for DNA densitometry, 667–675
polygene polymorphism, 635–642
polymorphism, biochemical in charr, 249–257
polymorphism for outcrossing frequency, 145–149
polymorphism for warning colouration, 677–686
polymorphism of *Danaus chrysippus*, 583–593
polymorphism, self-incompatibility in *Papaver*, 495–507
position effect in *Drosophila*, 215–222
prolamin genes of cereals, 572–573
properties of second cycle hybrids, 283–292
protein coding DNA sequences, 553

radiation-induced non-disjunction in mice, 564
recombinant DNA molecules, transfer of, 574
recombinant DNA technology, 574
recombinant inbred lines, intercrossing of, 283–292
recombination data, analyses of, 441–452
repetitive DNA in maize genome, 575–576
reproductive compatibility in *Cepaea*, 655–665
reproductive isolation in a grasshopper, 85–100
resistance of *E. coli* to mutagenic effect of MNNG, 558
ribosomal RNA gene clusters in hexaploid wheat, 572

salivary chromosomes and quantitative characters in *Drosophila*, 469–482
SCE tests of DAB and BZD, 579
second cycle hybrids, properties of, 283–292
seed provisioning, models of kin selection on, 151–165
selection on *Adh* in *Drosophila*, 51–67
self-incompatibility in *Lolium*, 239–240
self-incompatibility in ryegrass, 403–413, 415–422, 423–434
self-incompatibility polymorphism in *Papaver*, 495–507
sex advantage and mutational load, 717–720
sex chromosomes in lacertid lizard, 457–459
sex-linkage of phosphoglucomutase, 361–369
shell colour, genetics of, in snails, 11–20, 21–25
simultaneous joint scaling test, 205–213
single seed descent, inbred lines produced by, 299–308
single locus and segregation inheritance studies, 339–359
skeletal defects, genetic parameters for, 193–203
somatic hybridisation, 79–83
somatic mutations, detection of in RPE, 558–559
spontaneous duplication in *Aspergillus*, 554–555
star formations and fusion of centromeres, 435–439
storage proteins of peas, 573
strategy of breeding clonal crops, 397–401
sulphsalazine therapy for ulcerative colitis, 567
supernumerary chromosome segments of grasshoppers, 101–106, 167–175

taxonomy of genus *Taraxacum officinale*, 1–10
temperature, effect of on meiotic drive, 259–268
tetrads, pollen, use of for DNA densitometry, 667–675
thymineless mutagenesis in *E. coli*, 560
T1 DNA replication, 554
trisomigens—testing for in *Sordaria*, 564

UVR protein of *E. coli*, 569

variation, allozyme in brown trout, 339–359
variation, genetic, in reptile ticks, 509–525
variation in spontaneous mutation in *Drosophila*, 223–234
vector, new for plant transformation, 577–578
viability, biases in estimation of, 527–543
viability selection at linked loci, effect of on segregation ratios, 69–71
vicilin storage protein genes, 185–191

wild birds, colour preferences in food, 705–715
wing vein formation in *Drosophila*, 635–642
